

Rust Flora of the Ryukyu Islands, Japan

Yoshitaka ONO*, Kenji UEMATSU* and Masaomi HIKITA*

(Received September 13, 1991)

Abstract

Geographic distribution of rust fungi and their host plants were studied for a mycogeographical analysis of the Ryukyu Islands, in a broadest sense, from Yakushima and Tanegashima to Ishigakijima, Iriomotejima, Kita- and Minamidaitojima. Two hundreds and ninety-two species (one species with two varieties) in 41 genera were found to occur on 31 islands in the Ryukyus. Within the region, possible four mycogeographic subdivisions were suggested by the distribution patterns of the rust fungi. The Osumi Islands, the Amami Islands, the Okinawa Islands, and the Yaeyama Islands, as mycogeographical subdivisions (without formal designation of biogeographical categories and names), roughly corresponds to what was found by the vascular plant study.

Introduction

The Ryukyu Islands, or Ryukyus, as referred here to as the geographic region for a mycogeographical analysis of the rust fungi (Uredinales), includes Tanegashima (30. 40°N, 131. 00°E) and Yakushima (30. 20°N, 130. 30°E) on the northeast, Iriomotejima (24. 20°N, 123. 50°E) and Ishigakijima (24. 24°N, 124. 12°E) on the south, Yonagunijima (24. 27°N, 123. 00°E) on the west, and Kitadaitojima (25. 57°N, 131. 18°E) and Minamidaitojima (25. 50°N, 131. 15°E) on the southeast in the geographic area (Fig. 1). The Senkaku Islands (approximately 25. 50°N, 123. 30°E) is also included in the Ryukyu Islands in a broadest sense. Within this geographic limit, there are 118 islands with more than 0. 1 km² of area and 75 islands with more than 1. 0 km². The island of the largest acreage (1182. 52 km²) is Okinawajima. The islands lie as loose arc spreading from northeast to southwest. The Ryukyus consists of 1) mountainous high islands of Palaeozoic to Mesozoic and Palaeogenic (Tertiary) origins, 2) volcanic high islands of Neogenic (Tertiary) and Quaternary origins, 3) terrace islands of Quaternary origin, 4) emerged coral islands of Quaternary origin, and 5) sandy islands of the most recent origin (30). These topographically different islands with respective different geological origins lie roughly in the lengthwise in four zones. The high mountainous islands include 60 of those with more than 100 m altitude and 22 with more than 300 m. The highest mountain (1935. 3 m) is located on Yakushima.

* Laboratory of Biological Sciences, Faculty of Education, Ibaraki University, Bunkyo, Mito, Ibaraki 310, Japan.

Biogeographically, the Ryukyu Islands is one of the most interesting areas in Japan because of geological and topographical diversity of the islands with different geological histories and diversity of climatic conditions. Major groups of mammals, reptiles, avians, fishes, insects, flowering plants, ferns, and fungi have been studied for their species diversity and their distribution patterns in the Islands (see 19 for a brief review). Mycologically speaking, the rust fungi (Uredinales) have been most intensively studied for the Islands. A brief history of the rust study in the Ryukyus was given by Hiratsuka (6).

Phytogeographically, most parts of the Ryukyus as defined here are included in the Ryukyu or Tokara-Okinawa Province, with the exclusion of Yakushima and Tanegashima which are included in the Japanese-Korean Province, of the Eastern Asiatic Region of the Holarctic Kingdom, the former also being separated from the Taiwan Province (42). Maekawa (29) recognizes nine floral divisions (regions in his terminology) in the Japanese Archipelago. Of those, the islands from Amamioshima southward are included in the Ryukyu region, and Tanegashima and Yakushima are included in the Sohayaki region. The Ryukyu region is related to, but definitely different from Taiwan.

The study of the northern limit in the Ryukyus of distribution of species and genera of mostly tropical vascular plants revealed that 129 species in 53 genera have their northern limit on Miyakojima (the Miyako Islands), Ishigakijima and Iriomotejima (the Yaeyama Islands), 54 species in 27 genera on Okinawajima (the Okinawa Islands), and 142 species in 41 genera on Amamioshima (the Amami Islands) (1, 29). This indicates that the Ryukyu or Tokara-Okinawa Province in Takhtajan's sense or the Ryukyu region in Maekawa's sense can be subdivided into three parts although no formal biogeographical category and names are designated: 1) the Miyako and Yaeyama Islands, 2) the Okinawa Islands, and 3) the Amami Islands.

The recognition of a floristically significant line (or a zone at best) between the Amami Islands and northern islands agrees with the Watase line based on the mammal distribution study. The floristic disjunction between the Miyako-Yaeyama Islands and the Okinawa Islands corresponds with the Hachisuka line based on the avian distribution study. This study intends to see distribution patterns of rust fungi in the Ryukyu Islands and determine mycogeographically significant division(s), if any, of the Islands.

Materials and Methods

Geographic distribution records of rust fungi and their host plant records in the Ryukyus were extracted from the literature published in 1940 to 1991 (2-5, 7-18, 20-22, 28, 31-40), and were stored in a database with an aid of dBase III plusTM (Ashton-Tate Co.) for a subsequent mycogeographical analysis. The Sorensen's coefficient as an index of the mycofloristic similarities among the islands were calculated. The relationship between species number and island size were determined based on the island data provided by Mesaki (30).

Rust taxa and their hosts were arranged in an alphabetical order regardless of their phylogenetic relationships, and the distribution records were listed also in an alphabetical order under each rust taxon and each host taxon. Nomenclature of the host plants were corrected by manuals of flowering plants (1, 23-27, 43) and ferns (41).

Results and Discussion

Two hundreds and ninety-two species (one with two varieties) in 41 genera of rust fungi were found to occur on 31 islands. The islands on which the rust fungi (number of species and genera in parentheses) were recorded are: Takeshima (22 species-11 genera), Iwojima (12-4), Kuroshima (48-12); Tanegashima (76-14), Yakushima (155-26) (the Osumi Islands); Nakanoshima (63-9), Suwanosejima (16-8), Akusekijima (12-5), Kotakarajima (9-4), Takarashima (55-13) (the Tokara Islands); Amamioshima (130-23), Kikaishima (25-10), Kakeromajima (4-4), Tokunoshima (67-16), Okinoerabujima (3-2), Yoronjima (38-10) (the Amami Islands); Iheyajima (69-20), Izenajima (13-4), Okinawajima (179-26), Yagajishima (3-1), Ieshima (17-6), Minnajima (5-3), Ikeijima (1-1), Kumejima (56-12) (the Okinawa Islands); Kitadaitojima (11-5), Minamidaitojima (21-2) (the Daito Islands); Miyakojima (49-15) (the Miyako Islands); Ishigakijima (105-19), Iriomotejima (80-15), Yonagunijima (49-11) (the Yaeyama Islands); and Uwotsurijima (4-2) (the Senkaku Islands) (Fig. 1). The rust taxa recorded for the islands (refereces in a baldface number in parentheses) are:

- Aecidium arallae* Sawada ex S. Ito & Maruyama on *Schefflera octophylla* Harms.: Yakushima (7, 22, 37).
Aecidium clerodendri Hennings on *Clerodendron trichotomum* Thunb.: Amamioshima (7, 10, 13, 37); Suwanosejima (7, 14, 37); Takarajima (7, 14, 37); Takeshima (7, 15, 37).
Aecidium elaeagni-umbellatae Dietel on *Elaeagnus* sp.: Okinawajima (7, 10, 37).
Aecidium hornotinum Cummins on *Meliosma oldhami* Miq.: Ishigakijima (7, 11, 37); Tokunoshima (7, 40).
Aecidium meliosmae-pungentis Hennings & Shirai on *Meliosma rigida* Sieb. & Zucc.: Okinawajima (7, 37).
Aecidium minoense P. Sydow & H. Sydow on *Elaeagnus macrophylla* Thunb.: Nakanoshima (7, 14, 37).
Aecidium mori Barclay on *Morus australis* Poir.: Ieshima (7, 37); Ishigakijima (7, 11, 37); Okinawajima (2, 4, 7, 10, 37); Takarajima (7, 14, 37); Takeshima (7, 15, 37); Yakushima (7, 12, 16, 37); on *Morus bombycis* Koidz.: Ishigakijima (7, 37); Nakanoshima (7, 14, 37).
Aecidium orbiculare Barclay on *Clematis meyeniana* Walp.: Miyakojima (7, 37); Tanegashima (7, 37); on *Clematis pierotii* Miq.: Tanegashima (7, 37); on *Clematis terniflora* DC.: Tanegashima (7, 37).
Aecidium phyllanthi Hennings on *Phyllanthus flexuosus* (Sieb. & Zucc.) Muell. -Arg.: Amamioshima (7, 10, 13, 37); Iheyajima (7).
Aecidium raphiolepidis H. Sydow on *Raphiolepis umbellata* (Thunb.) Makino: Ishigakijima (7, 11, 37); Okinawajima (2, 4, 7, 10, 37); Takarajima (7, 14, 37); Yakushima (7, 16, 22, 28, 31, 37); on *Raphiolepis umbellata* (Thunb.) Makino var. *liukuensis* Koidz.: Iheyajima (37); Okinawajima (7, 37); on *Tutchelia virgata* (Koidz.) Nakai: Okinawajima (37: This is a doubtful record for the host is in Theaceae rather than Rosaceae).
Aecidium satsumense Hiratsuka, f. on *Arisaema ringens* (Thunb.) Schott: Tanegashima (16, 37).
Aecidium smilacis-chinae Sawada on *Smilax sebeana* Miq.: Iheyajima (7, 37); on *Smilax* sp.: Iriomotejima (7, 9).
Aecidium vincetoxici Hennings & Shirai on *Tylophora japonica* Miq.: Amamioshima (7, 37); Iheyajima (7, 37); Okinawajima (7, 37).
Aecidium zanthoxyli-schinifolii Dietel on *Fagara mantchurica* (Bennett) Honda: Kuroshima (7, 15, 37); Nakanoshima (7, 14, 37); Takarajima (7, 14, 37); on *Zanthoxylum beecheyanum* K. Koch: Izenajima (37); Okinawajima (37).
Aterocauda hyalospora (Sawada) Ono on *Acacia confusa* Merr.: Amamioshima (7, 11, 37); Iheyajima (7, 37); Iriomotejima (7, 8, 9); Ishigakijima (7, 8, 10, 11, 37); Kumejima (7, 37); Minamidaitojima (7, 37); Miyakojima (7, 10, 11, 37); Okinawajima (2, 4, 7, 9, 10, 37); Tanegashima (7, 12, 37); Tokunoshima (7, 13, 37); Yoronjima (38).

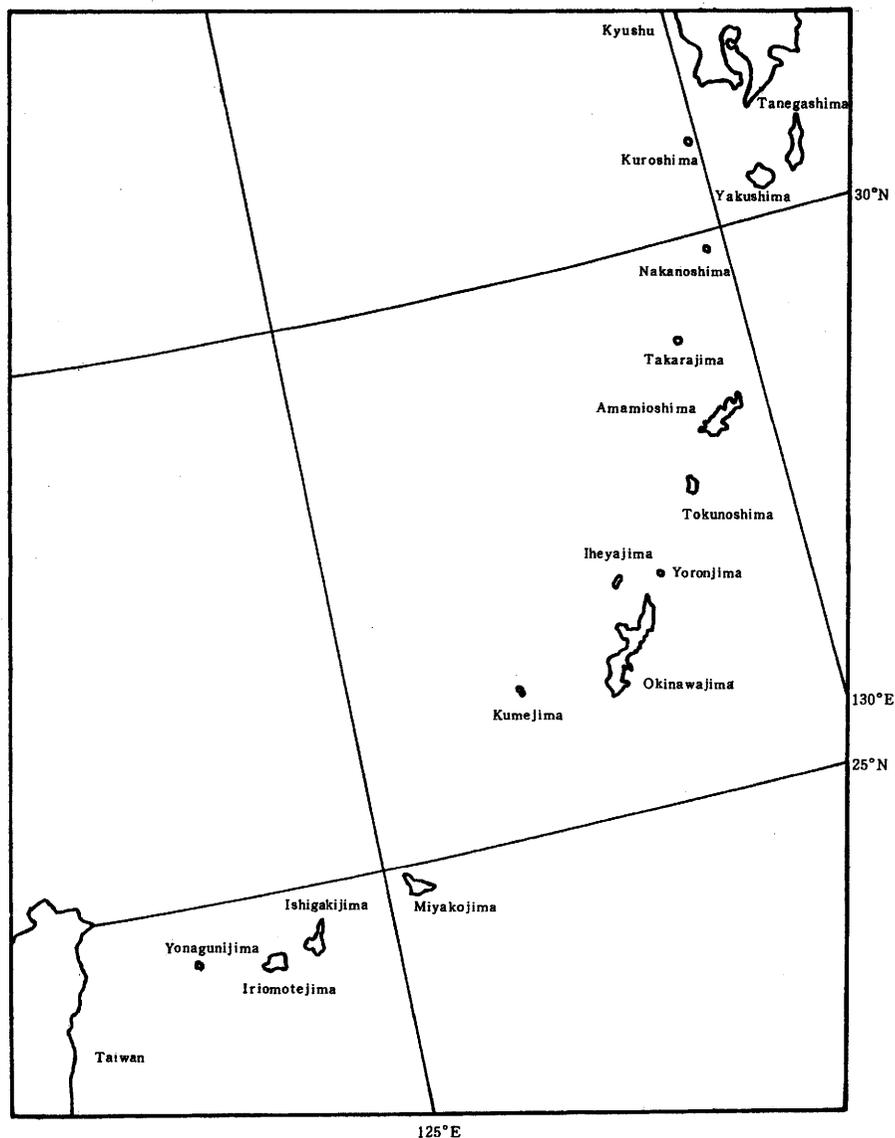

Fig. 1. Geographic distribution of the islands on which more than 30 rust species are recorded. Kuroshima (48 species in 12 genera); Tanegashima (76 species in 14 genera), Yakushima (155 species in 26 genera)(the Osumi Islands); Nakanoshima (63 species in 9 genera), Takarashima (55 species in 13 genera)(the Tokara Islands); Amamioshima (130 species in 23 genera), Tokunoshima (67 species in 16 genera), Yoronjima (38 species in 10 genera)(the Amami Islands); Iheyajima (69 species in 20 genera), Okinawajima (179 species in 26 genera), Kumejima (56 species in 12 genera)(the Okinawa Islands); Miyakojima (49 species in 15 genera)(the Miyako Islands); Ishigakijima (105 species in 19 genera), Iriomotejima (80 species in 15 genera), Yonagunijima (49 species in 11 genera)(the Yaeyama Islands).

- Cerotelium fici* (Butler) Arthur on *Ficus wightiana* Wallich: Ishigakijima (7, 37).
- Chrysocells gynostematis* Ono on *Gynostemma pentaphyllum* (Thunb.) Makino: Amamioshima (7, 34); Nakanoshima (7, 34).
- Coleopucciniella idei* Hiratsuka, f. on *Rhaphiolepis umbellata* Makino: Amamioshima (7, 13, 37); Iheyajima (7, 37); Miyakojima (7, 37); Okinawajima (7, 10, 37); Takarajima (7, 14, 37); Tanegashima (7, 16, 37); Yakushima (16, 21); on *Rhaphiolepis umbellata* (Thunb.) Makino var. *integerrima* (H. & A.) Masamune: Kumejima (7, 37); Tokunoshima (7); on *Rhaphiolepis umbellata* (Thunb.) Makino var. *liukiuiensis* Koidz.: Kumejima (7, 10, 37); Okinawajima (2, 4, 7, 10, 37); Yakushima (7).
- Coleopucciniella simplex* (Dietel) Hara ex Hiratsuka, f. on *Eriobotrya japonica* Lindl.: Okinawajima (7, 10, 37).
- Coleosporium asterum* (Dietel) P. & H. Sydow on *Aster indicus* L.: Amamioshima (7, 10, 13, 37); Ieshima (7, 37); Kikaishima (7, 13, 37); Kumejima (7, 37); Okinawajima (2, 4, 7, 37); Tokunoshima (7, 13, 37); Yoronjima (39); on *Kalimeris yomena* Kitamura: Kuroshima (7, 12, 37); Tanegashima (7, 12, 37); Yakushima (7, 12, 37).
- Coleosporium bletiae* Dietel on *Calanthe discolor* Lindl.: Amamioshima (7, 13, 32, 37); Tanegashima (7); Yakushima (7, 16, 21, 31, 37); on *Calanthe furcata* Bateman: Nakanoshima (7, 14, 37); Okinawajima (4, 7, 10, 37); Tanegashima (7, 37); on *Calanthe* sp.: Okinawajima (7, 10, 37); on *Phajus tankervilleae* (Banks) Bl.: Okinawajima (4, 7, 10, 37).
- Coleosporium carpesii* Saccardo on *Carpesium abrotanoides* L.: Amamioshima (7, 10, 13, 37); Yakushima (7, 37); on *Carpesium cernuum* L.: Amamioshima (7, 13, 37); Kuroshima (7, 15, 37); Okinawajima (2, 4, 7, 10, 37); Yakushima (7, 16, 21, 37); on *Carpesium divaricatum* Sieb. & Zucc.: Amamioshima (7, 13, 32, 37); Tanegashima (37); Yakushima (7, 16, 37); on *Carpesium rosulatum* Miq.: Tanegashima (7, 16, 37); on *Carpesium* sp.: Amamioshima (32); Yakushima (31).
- Coleosporium clematidis* Barclay on *Clematis terniflora* DC.: Amamioshima (7, 13, 32, 37); Kikaishima (7); Tanegashima (7, 16, 37); Yakushima (7, 16, 21, 31, 33, 37).
- Coleosporium clematidis-apifoliae* Dietel on *Clematis apiifolia* DC.: Yakushima (16, 37); on *Clematis grata* Wall.: Iheyajima (37); Iriomotejima (37); Ishigakijima (11, 37); Izenajima (37); Kumejima (10, 37); Minnajima (37); Okinawajima (2, 4, 10, 37); on *Clematis grata* Wall. var. *ryukyuensis* Tamura: Iriomotejima (7); Ishigakijima (7, 8, 9); Kumejima (7); Okinawajima (7, 9); on *Clematis leschenaultiana* DC.: Amamioshima (7, 13, 37); on *Clematis pierotii* Miq.: Nakanoshima (7, 14, 37); Yakushima (21).
- Coleosporium clerodendri* Dietel on *Clerodendrum fragrans* Vent.: Okinawajima (2, 4, 7, 37); on *Clerodendrum trichotomum* Thunb.: Akusekijima (7, 14, 37); Amamioshima (7, 13, 32, 37); Ieshima (7, 37); Iheyajima (7, 37); Iriomotejima (7); Ishigakijima (7, 11, 37); Iwojima (7, 15, 37); Kotakarajima (7, 14, 37); Kumejima (37); Kuroshima (7, 15, 37); Nakanoshima (7, 14, 37); Okinawajima (2, 4, 7, 10, 37); Suwanosejima (7); Takarajima (7, 14, 37); Tanegashima (7, 16, 37); Tokunoshima (7, 13, 37); Yakushima (7, 16, 21, 31, 33, 37); Yonagunijima (7, 37, 38); Yoronjima (39); on *Clerodendrum trichotomum* Thunb. var. *esculentum* Makino: Iriomotejima (9); Okinawajima (7); on *Clerodendrum trichotomum* Thunb. var. *yakushimene* (Nakai) Ohwi: Iriomotejima (9); Okinawajima (7, 9); Ishigakijima (7); Okinawajima (7); on *Clerodendrum* sp.: Ishigakijima (8); Kumejima (10); Okinawajima (10).
- Coleosporium eupatorii* Arthur on *Eupatorium luchuense* Nakai: Kuroshima (37); on *Eupatorium reevesi*: Yakushima (21).
- Coleosporium evodiae* Dietel ex Hiratsuka, f. on *Evodia glauca* Miq.: Amamioshima (3, 7, 13, 37); Iheyajima (37); Iriomotejima (7, 8, 9); Ishigakijima (7, 8, 9, 11, 37); Kakeromajima (7); Kumejima (7, 10, 37); Nakanoshima (7, 14, 37); Okinawajima (7, 9); Takarajima (7, 14, 37); Tanegashima (7, 16, 37); Tokunoshima (7, 13, 37); Yakushima (7, 21, 37); Yonagunijima (7, 37, 38).
- Coleosporium lycopi* P. Sydow & H. Sydow on *Adenophora triphylla* DC.: Amamioshima (7, 32); Kumejima (7); Nakanoshima (7); Okinawajima (7); on *Adenophora triphylla* DC. var. *insularis* (Kitamura) Kitamura: Amamioshima (13, 37); Kumejima (10, 37); Nakanoshima (14, 37); on *Adenophora triphylla* DC. var. *japonica* (Regel) Hara: Amamioshima (37); on *Wahlenbergia marginata* DC.: Kuroshima (7, 15, 37); Okinawajima (7, 37); Yakushima (7, 16, 21, 31, 37).

- Coleosporium paederiae*** Dietel ex Hiratsuka, f. on *Paederia scandens* (Lour.) Merr. var. *mairei* (Lev.) Hara : Amamioshima (7, 13, 32, 37); Kotakarajima (14); Kuroshima (15); Nakanoshima (14); Iheyajima (7, 37); Iriomotejima (7); Iwojima (7, 37); Izenajima (7, 37); Kotakarajima (7, 37); Kuroshima (7, 37); Minnajima (37); Nakanoshima (7, 37); Okinawajima (2, 4, 7, 9, 10, 37); Suwanosejima (7, 14, 37); Takarajima (7, 14, 37); Takeshima (7, 15, 37); Yakushima (7, 15, 21, 31, 33, 37).
- Coleosporium phellodendri*** Komarov on *Phellodendron amurense* Rupr. var. *lavalleyi* (Dode) Sprague: Yakushima (33).
- Coleosporium pini-asteris*** Orishimo on *Aster scaber* Thunb.: Tanegashima (37).
- Coleosporium plectranthi*** Barclay on *Clinopodium micranthum* (Regel) Hara: Yakushima (21); on *Isodon japonicus* (Burm.) Hara: Yakushima (7, 16, 21, 37); on *Mosla dianthera* (Hamilt.) Maxim.: Amamioshima (7, 13, 37); Kotakarajima (7, 14, 37); Takarajima (7, 14, 37); Takeshima (15, 37); Tanegashima (37); on *Mosla punctulata* (J. F. Gmel.) Nakai: Amamioshima (7, 13, 37); Tanegashima (7, 16, 37); Tokunoshima (7, 13, 37); Yakushima (7, 16, 37); on *Perilla frutescens* (L.) Britt. var. *citriodora* (Makino) Ohwi: Tanegashima (7, 16, 37); Yakushima (16, 37); on *Perilla frutescens* (L.) 15	34	41	33	35	44	40	48	41	50	35	54	37	52	52	

1. Kuroshima; 2. Tanegashima; 3. Yakushima; 4. Nakanoshima; 5. Takarashima; 6. Amamioshima; 7. Tokunoshima; 8. Yoronjima; 9. Iheyajima; 10. Okinawajima; 11. Kumejima; 12. Miyakojima; 13. Ishigakijima; 14. Iriomotejima; 15. Yonagunijima.

No definite mycogeographic pattern is recognized by inspection of the above distribution records. A similarity matrix (in the Sorrensen's coefficient) among fifteen islands, on which more than 30 rust species are recorded, (Table 1) indicates that the physical distance does not affect significantly similarities in the rust flora among the islands. The highest coefficients are found between Amamioshima and Okinawajima (64), between Ishigakijima and Iriomotejima (63), between Yakushima and Amamioshima (62), and between Yakushima and Okinawajima (61). These islands are most diverse in the rust species composition in the Ryukyus with more than 70 species recorded.

The relationships among species number, island area, and origin of islands show interesting tendencies in mycogeography of the Ryukyus (Fig. 2). Species number increases proportionally with the increase of island areas. This is a significant deviation from what has traditionally recognized in the island biogeography: logarithm of the species number proportionally relates to logarithm of the island area. No reason for this deviation in rust fungi in the Ryukyus is apparent. Those with larger areas and more species (Yakushima, Amamioshima, Okinawajima, Ishigakijima, and Iriomotejima) are high

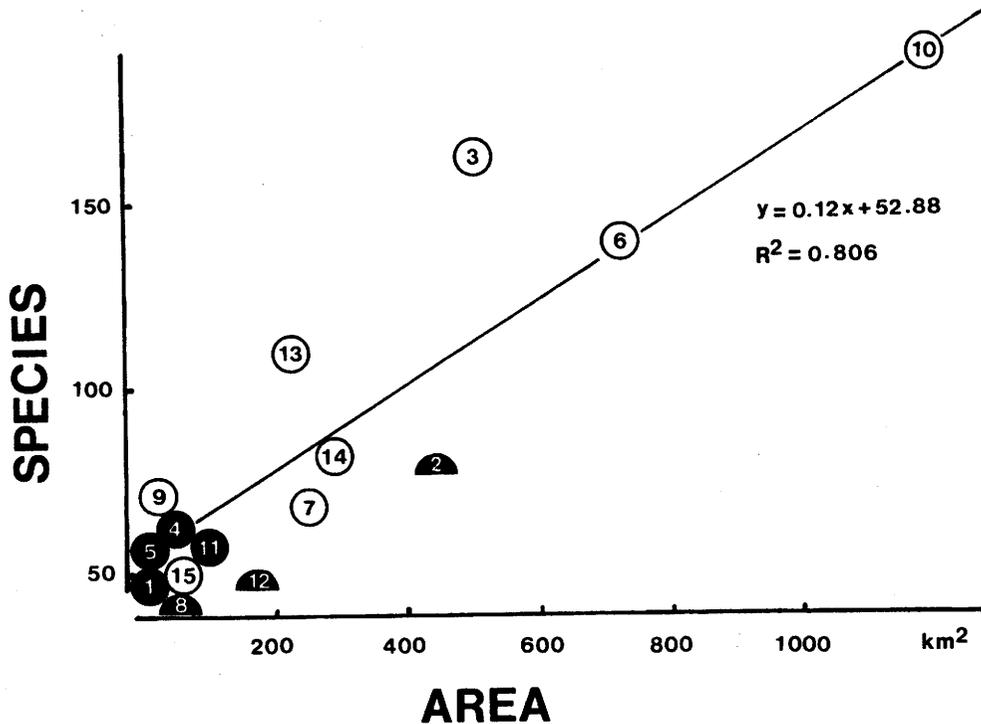

Fig. 2. Relationships among size and topography of the islands (with more than 30 rust species) and number of rust species recorded on them. Open circle: mountaneous high island. Solid circle: volcanic island. Solid semicircle: low island (either terrace or emerged coral). 1. Kuroshima; 2. Tanegashima; 3. Yakushima; 4. Nakanoshima; 5. Takarashima; 6. Amamioshima; 7. Tokunoshima; 8. Yoronjima; 9. Iheyajima; 10. Okinawajima; 11. Kumejima; 12. Miyakojima; 13. Ishigakijima; 14. Iriomotejima; 15. Yonagunijima.

mountainous islands of geologically older origin (before Tertiary). These large, high mountainous islands undoubtedly provide more diverse habitats for vascular plants. The islands of volcanic mountains (Nakanoshima, Takarashima, Kuroshima, and Kumejima) have less rust species. Those with smaller areas and least species are either low terrace (Tanegashima) or emerged coral (Miyakojima and Yoronjima) of geologically recent origin (mostly Quaternary)(30). Apparently, the period during which the islands were continuous to the Asian Continent, how the islands were isolated from the Continent, or how they were newly emerged are crucial for the establishment of vascular plants, and in turn rust fungi as their parasites, in the islands. These geological events, resultant size and topology of islands, and their physical distance have determined the diversity of vascular plants and their rust parasites of each island, and subsequently mycofloristic similarity or dissimilarity of the islands.

The overall similarity based on the Sorrensen's coefficient does not depict any geographic pattern of similarity distribution in the Ryukyu Islands. If rust species have extended their geographic distribution along the islands from southwest to northward and vice versa, however, there should be certain geographic distribution pattern of the areas with different species compositions in the Ryukyus. The study of the northward extension of mostly tropical rust species yielded the following results: 1) 7 species in 5 genera (*Cerotelium fici*, *Endophyllum kaernbachii*, *E. paederiae*, *Puccinia curculigonis*, *P. thaliae*, *Triphragmium pulchrum*, and *Uredo fagarae*) have their northern limit on the Yaeyama Islands, 2) 3 species in 3 genera (*Hapalophragmium derridis*, *Puccinia arundinis-donacis*, and *Uromyces orientalis*) on the Miyako Islands, 3) 15 species in 9 genera (*Hamaspora acutissima*, *Kernkampella breyniae*, *Maravalia achroa*, *Puccinia cenchri*, *P. hashiokai*, *P. keuhnii*, *P. taiwaniana*, *Ravenelia hobsonii*, *R. tephrosiicola*, *Skierka agallocha*, *Sphaerophragmium acaciae*, *Uromyces baeumlerianus*, *U. bidenticola*, *U. mucunae*, and *U. saururi*) on the Okinawa Islands, 4) 12 species in 8 genera (*Aecidium hornotinum*, *Crossopora antidesmae-dioicae*, *Crossopora premnae*, *Didymopsorella lemanensis*, *Endophyllum emasculatum*, *E. formosanum*, *E. griffithiae*, *Phakopsora tecta*, *Puccinia erebia*, *P. lophatheri*, *P. scirpi-ternatani*, and *Uredo psychotricola*) on the Amami Islands, 4) 3 species in 2 genera (*Phakopsora formosanum*, *P. malloti*, and *Puccinia philippinensis*) on the Tokara Islands, 5) 16 species in 8 genera (*Aecidium clerodendri*, *Crossopora malloti*, *Endophyllum lysimachiae*, *Phakopsora glochidii*, *Pileolaria pistaciae*, *Puccinia citrina*, *P. flaccida*, *P. panici-montani*, *P. paspalina*, *P. pogonatheri*, *P. polli-nicola*, *P. scleriae*, *P. variiformis*, *P. wattiana*, *Pucciniostele hashiokai*, and *Uredo sawadae*) on the Osumi Islands. Similarly, the study of southward extension of mostly cool-temperate rust species yielded the following results: 1) 19 species in 9 genera (*Coleosporium phellodendri*, *C. yamabense*, *Hyalopsora aculeata*, *Melampsora epitea*, *Milesina erythrosora*, *M. faulliana*, *M. vogesiaca*, *Phragmidium heterosporum*, *Puccinia acetosae*, *P. arundinellae-anomallae*, *P. dieteliana*, *P. infra-aequatorialis*, *P. metanartheccii*, *P. schedonnardi*, *Pucciniastrum corni*, *P. hydrangeae-petiolelaridis*, *P. kusanoi*, *Thekopsora vaccini*, and *Uredo diplazii*) have their southern limit on the Osumi Islands, 2) 3 species in 2 genera (*Aecidium minoense*, *Puccinia patriniae*, and *P. violae*) on the Tokara Islands, 3) 9 species in 6 genera (*Cronartium quercuum*, *Hyalopsora hakodatensis*, *Milesina exigua*, *M. pteridicola*, *Puccinia glechomatis*, *P. lapsanae*, *Pucciniastrum hikosanense*, *P. potentillae*, and *Uredo hiratsukai*) on the Amami Islands, 4) 40 species in 12 genera (*Aecidium elaeagni-umbellatae*, *A. lysimachiae-japonicae*, *A. meliosma-pungentis*, *A. vincetoxici*, *A.*

zanthoxyli-schinifolii, *Coleosporium bletiae*, *C. lycopi*, *Gymnosporangium asiaticum*, *Hyalopsora polypodii*, *Milesina odontosoriae*, *Ochropsora nambuana*, *Phragmidium griseum*, *Puccinia aestivalis*, *P. agropyri-ciliaris*, *P. allii*, *P. angelicae*, *P. breviculmis*, *P. crepidis-intergrae*, *P. horiana*, *P. lactucae-repentis*, *P. microspora*, *P. miyoshiana*, *P. nanbuana*, *P. nishidana*, *P. oenanthes-stoloniferae*, *P. ophiopogonis*, *P. phellopteri*, *P. phragmitis*, *P. stauntoniae*, *P. tokyensis*, *Pucciniastrum agrimoniae*, *Tranzschelia discolor*, *Uredinopsis kameiana*, *U. macrospermae*, *U. pteridis*, *Uromyces dactylidis*, *U. dianthi*, *U. durus*, *U. gallii*, and *U. striatus*) on the Okinawa Islands, 5) 5 species in 3 genera (*Milesina microspora*, *Phragmidium pauciloculare*, *Puccinia exhausta*, *P. kylingiae-brevifoliae*, and *P. lactucae-denticulatae*) on the Miyako Islands, and 6) 7 species in 4 genera (*Melampsora coleosporioides*, *M. idesiae*, *Phragmidium rosae-multiflorae*, *Puccinia angustata*, *P. crepidis-japonicae*, *P. hemerocallidis*, and *Uromyces ervi*) on the Yaeyama Islands.

These northern and southern limits of geographic distribution of mostly tropical and cool-temperate rust species on the Ryukyu Islands indicate that mycogeographically significant disjunctions exist between the Osumi and the Tokara-Amami Islands, between the Amami and the Okinawa Islands, and between the Okinawa and the Miyako-Yaeyama Islands. These mycogeographical disjunctions correspond with what have been observed in the vascular-plant distribution (1, 29): 129 species in 53 genera of mostly tropical vascular plants have their northern limits on the Yaeyama Islands, 54 species in 27 genera on the Okinawa Islands, and 142 species in 41 genera on the Amami Islands. The Osumi Islands is also different in the rust species composition from the mainland of Kyushu. Although full analysis has not yet been completed, it has been suggested that the Taiwan and the Miyako-Yaeyama Islands are rust floristically quite different. This can be suspected alternatively from the difference in vascular plant flora between the two geographic areas, because rust fungi are biotrophic parasites of vascular plants and because geographic distribution of rust fungi are dependent primarily, but not exclusively, upon the distribution of their host plants.

Within the island groups circumscribed by the similarity within the group of, and the difference between the groups in, the rust species composition, the rust floras of terrace islands, emerged coral islands, and sandy islands are significantly different from those of high mountaneous islands and volcanic islands. These low islands show significantly less rust species diversity. This is due largely to less habitats available for vascular plants and to ecophysiological constraints exerted to vascular plants, on which rust fungi obligately parasitize, to occur on these low islands. A limited number of plant species with high salt-tolerance or tolerance to physiological desiccation can grow on those islands, and this in turn limits the number of rust fungi to be distributed in these islands. The low diversity of rust species in the low islands is due also to relatively short geological time available for rust fungi to migrate from the nearest islands.

The rust flora of the Ryukyus has not been determined simply by the northward or southward extension, along the island arc, of rust fungi that are potentially capable of being distributed. But this study indicates that the gradual extension of geographic distribution is a major factor in determining the rust species composition of each island and the recognizable mycofloristic divisions in the Ryukyus. Floristic mycogeographically, the Ryukyus fall into a single province in Takhtajan's sense, and no formal mycogeographical subdivisions and names are applied to the island groups between which the rust

species compositions are different. Rather, the difference observed by this study will aid at the historical mycogeographical analysis of the Ryukyu Islands.

The Ryukyus has the following endemic rust species: *Aterocauda hyalospora*, *Chrysocelis gynostemmatis*, *Hamasporea okinawaensis*, *Puccinia lepturi*, *P. scirpi-ternatani*, *Uromyces kumigamiensis*, *U. tairae*, *U. thermopsidicola*, *U. yakushimense*, *Uredo horikawai*, *U. iriomotense*, *U. yakushimensis*, and *Xenosteles takakumensis*. The phylogenetic relationships to suspected parent and/or sister species and their relations in geographic distribution will provide a clue to the establishment and further development of the rust flora of the Ryukyu Islands.
